

.NET Web Developer

Our .NET Web Developers work with our project teams to deliver high impact business solutions using the latest Microsoft technologies. Candidates should have real-world .NET web development experience and should be fully versed in developing with ASP.NET (C# and/or VB.NET). The ideal candidate will be willing and able to contribute to design sessions and develop in a highly iterative manner.

Applicants should be comfortable in a fast-paced and continually changing environment. Some regional travel may be required.

Requirements:

- Strong programming experience (2+ years) using Microsoft .NET technologies in a web-centric environment
- Analyze, design, develop and implement Web applications using ASP.NET, C#, Web Services, XML, SQL Server, Visual Studio, and JavaScript
- Work collaboratively with members of the technical project team and client staff
- Demonstrated experience in delivering Web-based applications
- Understanding and experience of object-oriented design and architectural practices
- Experience with data modeling and design, especially using Microsoft SQL Server
- Excellent organizational and project skills, including ability to organize time and work on multiple tasks
- Excellent analytical and problem-solving skills, including high degree of attention to detail and accurate processes
- Experience with SharePoint-based web part development is a plus
- Ability and interest in knowledge transfer, blogging, and concept presentation, such as at user group meetings
- Microsoft Certification (MCP) is preferred

Applicants who meet a majority of the position requirements will be considered. Local candidates preferred (no relocation available). No 3rd party calls.
